LAB ASSIGNMENT 4
Friday, February 24

----

1. Write a javascript program to accept a number and create the multiplication table for the given number for example

   If the user inputs as 10 then the result shall be
10 x 1 = 10
10 x 2 = 20
….
10 x 10 = 100

And the page should have a button when clicked shall ask for accepting the number, when entering the number, it shall accept the number and continue the operation.

2. For the above program write the javascript code in a separate file call it multiplication.js and for the same write a test case using Jasmine. There shall be 3 test cases listed below
   a. For -ve value
   b. For +ve value
   c. For String value
